

WP1 – Projects & Impact analysis

D1.1 Project outreach and analysis package

Publishable summary

NEURONET is a Coordination and Support Action (CSA) aiming to support and better integrate projects in the Innovative Medicines Initiative (IMI) Neurodegenerative Disorders (ND) portfolio. WP1 Projects & Impact Analysis is a descriptive and methodological work package (WP) that will collect information (e.g. scope, deliverables, funding etc.) about IMI ND projects to enable an integrated view of the IMI ND project portfolio in terms of relative specialisation, timelines, expertise and outputs. This deliverable reports on the workflow and processes followed by WP1 to develop a full set of dimensions and indicators to be used for the IMI ND integrated portfolio analysis (Task 1.3) and impact analysis (Task 1.4), forming the foundation for all the subsequent tasks and deliverables of WP1 throughout the project duration. Moreover, the overall strategy to obtain information from IMI ND projects is also described.
