

WP3 – Tools and services

D3.3 First version of regulatory/HTA/payer interaction decision tool

Publishable summary

NEURONET is a Coordination and Support Action (CSA) aiming to support and better integrate projects in the IMI Neurodegenerative Disorders (ND) portfolio. WP3 *Tools and Services* aims to develop tools and services to support the IMI ND projects in areas where unmet needs have been identified. One of these areas is to provide further support for health technology assessment (HTA) and regulatory liaison.

This deliverable reports on the development of a Decision Tool aimed at identifying the key processes and procedures for engagement with regulatory, HTA bodies, and payers at key points in the development of an asset. The tool will help the IMI ND projects in identifying the most appropriate procedures and ways in which they can interact with different stakeholders, based on the project's stage of research and type of asset being developed. This will help ensure that the outputs being developed by projects that are part of the IMI Neurodegeneration portfolio are relevant for regulatory and HTA settings, where applicable.
